

Facility Names, possibly followed by a Location Name, indicate the area served by a particular system. In the vast majority of cases, the area served and the location of the system are identical. For example, all the air handlers in the Humphreys Service Building serve locations in that same facility. Occasionally, however, the area served by a system and location of the physical components of that system are in different facilities. The chilled water metering equipment for the Friedman Wrestling Center, for instance, is located in the adjacent building, Bartels Hall. In this case, the facility name FriedmanWrestlingCenter is used and the location of the equipment is provided in the description of the metering equipment rather than in the EMCS point name. Here is a list of all of our current Facility Names and their associated Facility Codes.
